

## Night Flight Concepts Announces Bell 206/407 Factory-Equivalent Training at Substantial Savings

Night Flight Concepts, a comprehensive night vision solution company, is announcing a cost-effective training alternative for Bell 206 and 407 operators. These courses are being offered as part of Night Flight Concept's *TURN Green...TURN Key*<sup>™</sup> comprehensive training solution package.

The Bell 206 & 407 Initial and Recurrent Training courses offered by Night Flight Concepts are comparable to the training programs provided by the Original Equipment Manufacturer (OEM), at a fraction of the cost. These courses highlight the same content and maneuvers as the OEM, to include touchdown autorotations, hydraulic failures, tail-rotor malfunctions, and FADEC emergencies. Training programs will be tailored to the needs of the customer to include low altitude, night (aided/unaided), and out-of-ground-effect autorotations, along with other maneuvers associated with specialized flight profiles. In addition, this training may be combined with Night Vision Goggle training.

Night Flight Concepts staff pilots include previous Instructors for the OEM, military, and industry operators. Customers have the option of training in their own aircraft at their location, or training at the Night Flight Concept's facility in Palm Beach, Florida.

"During this current economic slowdown, it's become crucial to find ways to reduce spending, while maintaining quality. Night Flight Concepts provides factory-equivalent training at tremendous savings, as compared to the OEM", as quoted by Randy Rowles, Chief Flight Instructor for Night Flight Concepts. In addition to turbine factory-equivalent courses, night vision goggle (NVG) pilot and maintenance training courses, as well as primary helicopter training and FAA pilot examinations are also available."

Night Flight Concepts is based in Port St. Lucie, Florida. Night Flight Concepts provides complete night vision goggle equipment, flight training, NVG inspections/maintenance, and support for global customers looking to improve night flight safety for rotary wing flight operations. The company can also provide aircraft cockpit, cabin and crew station night vision capable modifications, installation and related consulting. *TURN Green...TURN Key*<sup>™</sup> is a comprehensive all-inclusive solution for Night Vision Goggle operators.
