

Night Flight Concepts Announces FAA Part 141 Night Vision Goggle Course Approval

Night Flight Concepts, a comprehensive night vision solution company, is announcing FAA Part 141 approval for NVG Initial, Recurrent, and Instructor Pilot courses. These courses are being offered as part of Night Flight Concept's *TURN GREEN...TURN KEY*[™] comprehensive training solution package.

FAA Part 141 approved NVG courses offered by Night Flight Concepts is part of a strategic alignment effort between Night Flight Concepts and Palm Beach Helicopters. Since 2006, Night Flight Concepts and Palm Beach Helicopters have combined their unique capabilities and experience. More than a year ago, this alignment effort brought to industry the first NVG Robinson R-44. This aircraft was equipped for NVG operations through the FAA STC process by REB Technologies of Bedford, Texas. Currently, FAA Part 141 NVG training may be conducted in both the Bell 206 and Robinson R44 at the Palm Beach, Florida location.

In this alignment, the aircraft and training facility are provided by Palm Beach Helicopters. All NVG instructional staff and training courseware is provided by Night Flight Concepts. The benefit to the customer is highly experienced NVG instructors, well maintained aircraft, and a multitude of training options to include Private Pilot to ATP.

"We are very excited to be only the fourth FAA Part 141 NVG provider approved by the FAA. Our company only utilizes FAA TSO approved NVG's and is the only civilian NVG training provider using the Night Readiness, LLC Virtual Terrain Board (VTB) further demonstrating our commitment to industry. We feel our alignment with Palm Beach Helicopters provides a robust and comprehensive solution to industry for all of their training needs", as quoted by Randy Rowles, VP Business Development for Night Flight Concepts.

Night Flight Concepts is based in Port St. Lucie, Florida. Night Flight Concepts provides complete night vision goggle equipment, flight training, NVG inspections/maintenance, and support for global customers looking to improve night flight safety for rotary wing flight operations. The company can also provide aircraft cockpit, cabin and crew station night vision capable modifications, installation and related consulting. *TURN GREEN...TURN KEY*[™] is a comprehensive all-inclusive solution for Night Vision Goggle operators.
